

## Author Responsibilities

By submitting a manuscript to this journal, each author explicitly confirms that the manuscript meets the highest ethical standards for authors and coauthors. The results of research should be recorded and maintained in a form that allows analysis and review. A paper should contain sufficient detail and references. Other individuals who have contributed to the study should be acknowledged. Only persons who have significantly contributed to the research should be listed as authors. It is unethical for an author to publish manuscripts describing essentially the same research in more than one journal of primary publication. Submitting the same manuscript to more than one journal concurrently is unethical and unacceptable.

Authors are required to prepare their manuscripts according to the format given in **Guidelines For Authors**

Authors are invited to submit the names, addresses and e-mail addresses of up to four potential reviewers. Decision on whether or not the suggested referees are used lies solely with the editors. The guidelines below indicate the actions of the copy editing service when a completed article is ready to enter the production process, but it is essential that you submit text that is as correct as it possibly can be.

- Check that the general style and format of the paper (including the references) has conformed to the Journal guidelines.
- Check that all figures/artwork are of publishable quality, otherwise authors will be asked to provide replacements.
- Check layout (such as wrong floating of figures or tables).
- Check all references to ensure all essential information is included, and are cited in accordance to the journal format.
- Check errors in grammar or syntax other than the very basic ones.
- Check spelling errors of scientific words/terms.
- Check wrong cross-references among formulae and text.
- Check mistakes in formulae and equations.
